KWAME EMMANUEL ADOM

+233 53 275 9082 / +233 50 392 9287| kwameadom607@gmail.com | Kumasi, Ghana
github.com/kwame607 | www.admunz.com

PROFESSIONAL SUMMARY

Innovative and self-driven Computer Science graduate and full-stack developer with practical experience in software engineering, fintech systems, Linux environments, and cybersecurity projects. Founder and developer of Admunz Data Hub (www.admunz.com) , a growing online platform for digital data services and customer onboarding. and adepamarket (www.adepamarket.admunz.workers.dev), an e-commerce website for ghanaian fashion sellers. Experienced in designing responsive web applications, API integrations, managing deployments,networking, cybersecurity and interactive 3D web technologies. Strong problem-solving abilities combined with leadership, creativity, and continuous self-development.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, C++, SQL

Frameworks & Tools: Django, Fastapi, Git, GitHub, Linux CLI, A-Frame

Web Technologies: Responsive Web Design, HTML, CSS, APIs, Frontend Development, REST API Integration

AI & Machine Learning: Scikit-learn, Logistic Regression, Support Vector Machines (SVM), Random Forest, TF-IDF, Feature Engineering, Text Classification, Model Evaluation, LIME Explainability

Computer Graphics: A-Frame, GLB/GLTF asset integration, 3D Scene Composition, Interactive Camera control

Networking & Systems: TCP/IP, Subnetting, Port Scanning (Nmap), Network Troubleshooting, Windows/Linux System Recovery, NTFS/Disk Diagnostics

Cybersecurity: OWASP Top 10, Vulnerability Assessment, Kali Linux, Metasploit Framework, Burp Suite

Other Skills: Cybersecurity Fundamentals, Networking, UI/UX Design

AI & Development Tools: AI-Assisted Development, Vibe Coding, Prompt engineering, Rapid Prototyping

PROFESSIONAL EXPERIENCE

Founder & Full-Stack Web Developer | Admunz Data Hub

2026 – Present

- Founded and developed an online platform for data bundle sales and digital services.
- Developed and maintained website interfaces and platform functionality to support customer transactions and agent onboarding.
- Worked with APIs, payment integrations, and backend services to support platform operations.
- Managed deployment, troubleshooting, and ongoing improvements to the platform.

Web Developer | AdepaMarket

2026 – Present

- Developed an e-commerce marketplace designed to connect Ghanaian fashion sellers with customers.
- Built responsive interfaces for browsing fashion products, including clothing, footwear, and accessories.
- Worked on marketplace functionality and user experience to support product discovery and online shopping.
- Deployed the marketplace using Cloudflare Workers.

Website Developer & Graphic Designer | Citybeans Restaurant

2026 – Present | Freelance / Project-Based

- Designed and developed a website to establish the restaurant's online presence.
- Created graphic design materials to support the restaurant's branding and promotional activities.
- Worked on responsive layouts and website presentation to improve usability across devices.

Web Developer | Wisewave Enterprise

2025 – Present

- Developed a business website presenting the company's services across travel and tours, automobile imports, fashion designing, mobile money transfers, and education consultancy.
- Organized website content to communicate the company's different service offerings clearly.
- Implemented responsive layouts and interactive website components to improve accessibility and usability.

IT Support & Website Administrator | Aslin Fashion School

2024 – 2026

- Provided IT support for the organisation's website and online systems.
- Assisted with website updates, routine maintenance, and troubleshooting.
- Helped manage digital tools and online services used in the organisation's operations.

PROJECTS

MoMo Fraud Shield | Python, Flask, Scikit-learn, TF-IDF, Logistic Regression, LIME, HTML, CSS, JavaScript

- Designed and implemented a machine learning web application to identify potentially fraudulent messages involving mobile money and social engineering.
- Trained and compared Logistic Regression, Support Vector Machine (SVM), and Random Forest classifiers using a dataset of 9,447 labelled messages; selected Logistic Regression based on its recall performance on the held-out test set.
- Combined TF-IDF text representations with eight engineered linguistic and contextual features to support message classification.
- Implemented risk categorisation, linguistic indicator detection, and LIME-based explanations to help users understand factors influencing predictions.

- Developed a Flask interface that displays estimated fraud probability, risk level, influential words, and practical safety recommendations.
- Achieved **98.34% recall, 99.16% precision, and 98.97% accuracy** on the reported held-out test set.

Final-Year Project: *An AI-Based System for Detecting Impersonation and Mobile Money-Related Social Engineering Fraud in Digital Communication.*

Network Port Scanner | Python
Developed a Python-based network scanning tool capable of identifying active ports and services using TCP socket programming.

Interactive Villa VR Experience | A-Frame, HTML5, CSS, JAVASCRIPT, GLB/GLTF
Developed and deployed an interactive 3D villa environment featuring a modern house, swimming pool, gym, garden, vehicle and furniture. Implemented a desktop movement and camera-look controls alongside mobile touch controls for navigation and camera movement.

LAN Chat Application | Python & Socket Programming
Built a real-time communication application using client-server architecture for local network messaging.

File Encryption & Security Simulation | Cybersecurity
Created an educational encryption simulation project to study defensive cybersecurity concepts and threat mitigation.

Student Management System | Python + SQLite
Developed a CRUD-based management system with database integration and modular software structure.

Personal Portfolio Website | HTML/CSS/JavaScript
Designed and deployed a fully responsive portfolio website showcasing professional projects and technical skills.

Wisewave Enterprise Website
Built a professional business website with responsive layouts, interactive components, and modern frontend practices.

Penetration Testing Home Lab | Kali Linux, Nmap, Metasploit
Built an isolated home lab using Kali Linux and deliberately vulnerable targets (Metasploitable 2) to practice network reconnaissance, service enumeration, and vulnerability assessment aligned with OWASP Top 10 categories, in preparation for web application security and bug bounty work.

EDUCATION

University of Cape Coast - BSc Computer Science

Osei Tutu High School - General Science

CERTIFICATIONS

Introduction to Cybersecurity – Cisco Networking Academy

Ethical Hacking – Cisco Networking Academy

ACHIEVEMENTS

- Designed and implemented **MoMo Fraud Shield**, a machine learning prototype for detecting potentially fraudulent mobile money-related and social engineering messages, as my final-year project.

- Evaluated three machine learning classifiers and achieved 98.34% recall with the selected Logistic Regression model on the reported held-out test set.
- Founded and developed Admunz Data Hub, an online platform for data bundle sales and digital services.
- Developed AdepaMarket, an e-commerce marketplace connecting Ghanaian fashion sellers with customers.
- Built and deployed web development projects, including business websites and an interactive 3D villa experience.
- Earned the Cisco Networking Academy **Introduction to Cybersecurity** certificate and continued professional development in ethical hacking.
